The benefit of the doubt is well earned Last week I explained how the Federal Trade Commission's new policy on more consumer protections online meant that a lawsuit accusing Twitter of sharing data with Cambridge Analytica could resume.

Twitter has always had the right to make consumer data available to its third-party partners and it would have continued to do so even if the new privacy policy were in effect. The problem here was not its new privacy policy, but the way that it was implemented. For a company like Twitter, making consumer data available in this manner is an all-encompassing data capture — when you use Twitter, your tweets, any applications that you have installed or any information you have supplied is used to sell advertising. As I pointed out, the FTC has an obvious reason for not wanting this kind of data capture: “The consumer’s role in this process is

---

simply to let the advertiser see what he or she is looking at and let the advertiser place ads for products and services.” It is hard to imagine why any company would want to sell consumer data in the traditional way — simply capturing the data for itself and selling it — when you could tap into the social graph and buy data in a way that is both more efficient and way more profitable. But the danger in using social graph data is that it becomes more and more commoditized. The price of the data is obviously astronomical, but its value to a company is not just the price tag. The value is the insights that are generated from tapping into the social graph. The issue now is not whether or not Twitter wants to sell its consumer data in this way. The issue is whether it will face the same kinds of restrictions that the FTC has for Facebook. Once again, the FTC’s main concern is that your personal information be used in a way that is inimical to your interests. This is completely reasonable. But if the easiest way to

---

do this is to sell that data, then there is little benefit in assigning the benefit of the doubt. When Amazon first started selling data, it chose not to ask you for explicit consent to sell the data. Many criticized Amazon for this, arguing that they were not sure what they were doing with the data and whether it was really in your interest. Eventually, however, they adopted a policy in which they asked for explicit consent. If, after they receive that consent, you choose not to give

Fourth of July, Do You Know? The Fourth of July is an American holiday that commemorates the anniversary of the signing of the Declaration of Independence in 1776. While the holiday is a cultural one and not an exclusively religious holiday, it is referred to as the Independence Day and the 4th of July. It was originally celebrated on July 2 of each year, but in 1777, the date was

---

moved to the 4th of July. Although the date celebrates the anniversary of the signing of the Declaration of Independence, the holiday is not a federal holiday. The United States Congress does, however, declare the 4th of July as a legal public holiday and encourages workers to take off time from work.
