It is a protocol that allows the lighting controller to communicate with the lighting fixtures in a network environment. It is different from other lighting control systems which are usually stand-alone, such as DMX512. This document provides a user manual that will explain DMX protocol, its features, and how to use the hardware to its fullest.. DMX is a protocol used for controlling light fixtures.. 1,000 DMX channels are available. This camera may also be used with the B+W 302. 38, 25,.The present invention relates to the electrical art and more particularly to a thermal protection device for electrical apparatus which is particularly useful in the automotive environment. Thermal protection systems are designed and developed for certain critical applications in the aviation and space industries. Such thermal protection systems serve to protect critical electrical apparatus from overheating. An important factor in designing such thermal protection systems is a system which detects the heat generated by the electrical apparatus, and then controls a predetermined temperature rise of the electrical apparatus in order to allow the electrical apparatus to operate. Over the years, thermal protection systems have been developed for applications in the automotive environment. However, these thermal protection systems are not as effective as they should be for certain high load applications. One reason for this ineffectiveness is that such thermal protection systems, designed for use in automotive applications, are normally installed at an early stage of design of the automobile. This installation occurs at a time when the design parameters and conditions of the automobile are known. However, since the automobile will typically undergo several design modifications and the application of service conditions during its subsequent use, it is difficult to design a thermal

protection system which will protect the electrical apparatus during such subsequent use. The thermal protector device of the present invention is designed to correct this problem.
