reddy pdf 122 New OSI
framework enables
retrofitting Latest
Offshore Safety
International (OSI)
regulations require that
compliance with the
rules be easy for
anyone who enters the
offshore and offshore

construction marketplace, regardless of experience level. Also, "on-job" training and on-job monitoring of compliance should be covered under OSI guidelines, as should better communication and training for employees of subcontractors. In 2009, OSI will institute an extension of its OSI-10

framework that will provide safeguards for employees at all levels of the supply chain - from contractor to subcontractor to journeymen to subcontractors. OSI credits the new OSI-12 framework to its membership. "What really struck us from the beginning is that we really had to extend the

framework and make sure that it was accessible to everyone," said OSI spokesman Mark Williams. "It's been a real challenge to see if we could make it easy enough that we would achieve the 10 percent of the offshore industry compliance that we needed." The new compliance structure aims to be

more flexible and easier for companies to implement. "As a part of the new compliance program, 10 percent of compliance starts from the very first day of construction and continues through the entire life of a project," explained Williams. OSI is shifting its focus to compliance and the newly established

"Journeyman Framework" will also include topics such as architecture and materials. One of the new OSI-12 criteria includes the requirement for all subcontractors to be familiar with the 10 percent compliant standards and be working in accordance with them. This includes

training and testing for subcontractors and journeymen who may be called in to address compliance issues.

Williams said that he expects subcontractors to be forthcoming and cooperative, but added that the organizations that form the basis of the new framework understand and anticipate that some

may take some time to be certified. He also expects that in some cases, OSI member companies could call on the services of a certified compliance consultant to help. What is Multitasking?

According to popular definition, Multitasking is the ability of doing more than one task or activity at the same

time. Many of us (a middle age female) are told that we can't multitask because our brain is not programmed for that and it may make our brain to develop wrong.

I don't know if that'
